## Team: own2020

Antonis Lamprou, Konstantinos Stavrou

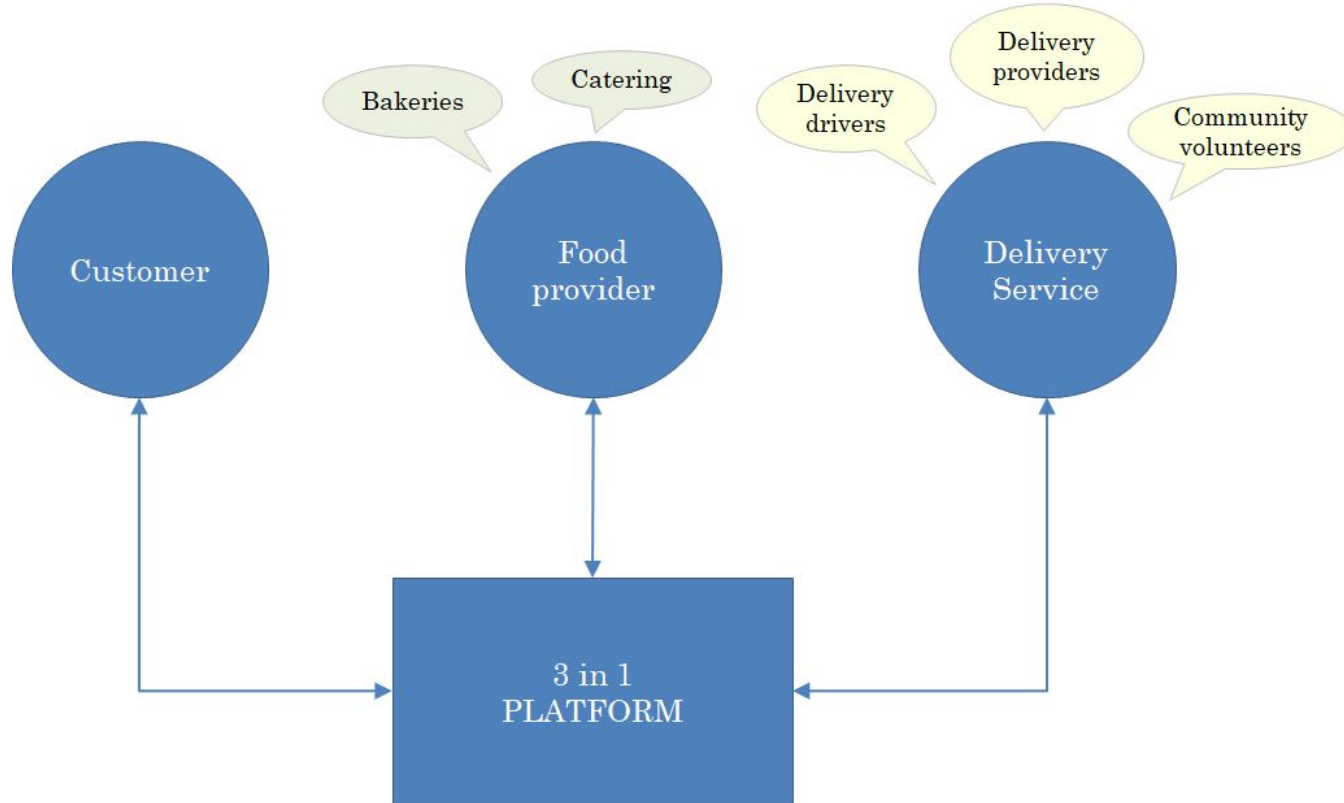

Special thanks

Galatia Partheniou

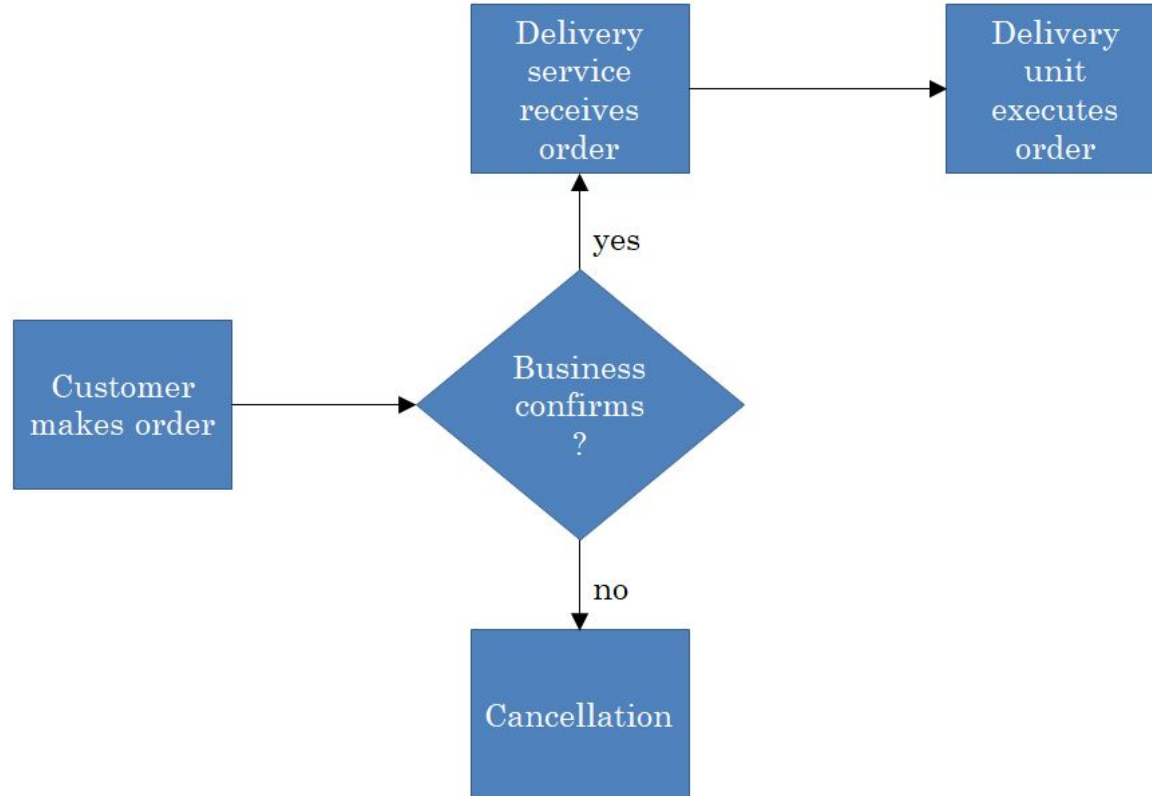

# Problem definition

- Online food delivery services are on high demand.
- Many food providers (bakeries, catering) are losing revenue as they are not ready to provide delivery services.
- Even if a business hires a delivery service contractor, their communication would be problematic.
- **A platform is needed to offer online communication between customer, business and delivery service.**

# Solution

# How it works

# Benefits

- Survival of businesses.
- Provide coordination of businesses with delivery services or volunteers.
- Make people's lives easier!

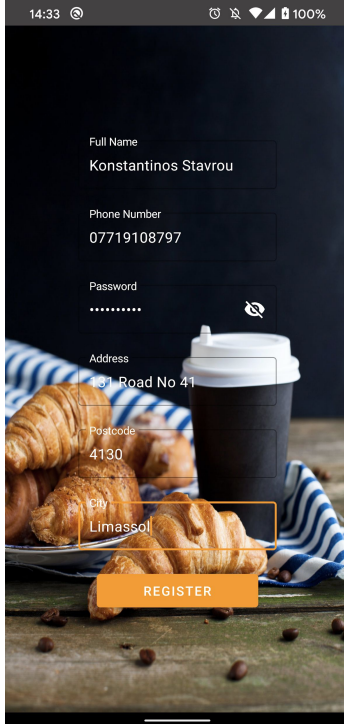

# Plan

We may need help with the following:

- Finish the MVP.
- Find contacts.
- Find delivery services or community volunteers.
- Let people know.

# Prototype - Android app

## Delivery View

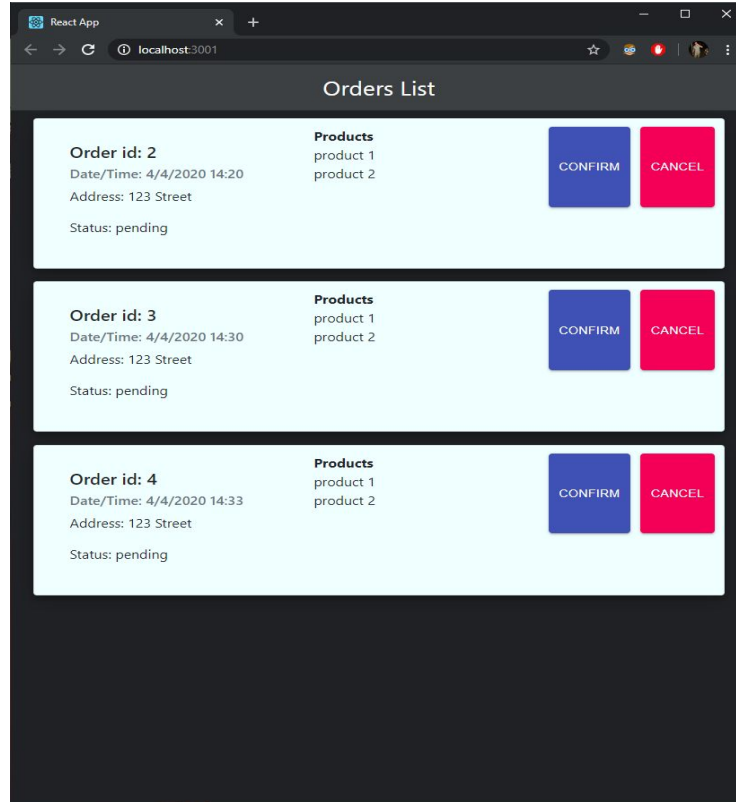

# Bakery Delivery Android App - Functionality

- The user would be able to Register using their details
- Once registered the user would be able to use the app
- On the home screen the user would be able to see all the available stores and selected a store
- Once the user has selected a store then they will be able to view the Products and add them to their basket
- Then they will be able to select a payment method and submit their order
- Once the order has been accepted they will see the delivery screen with status updates

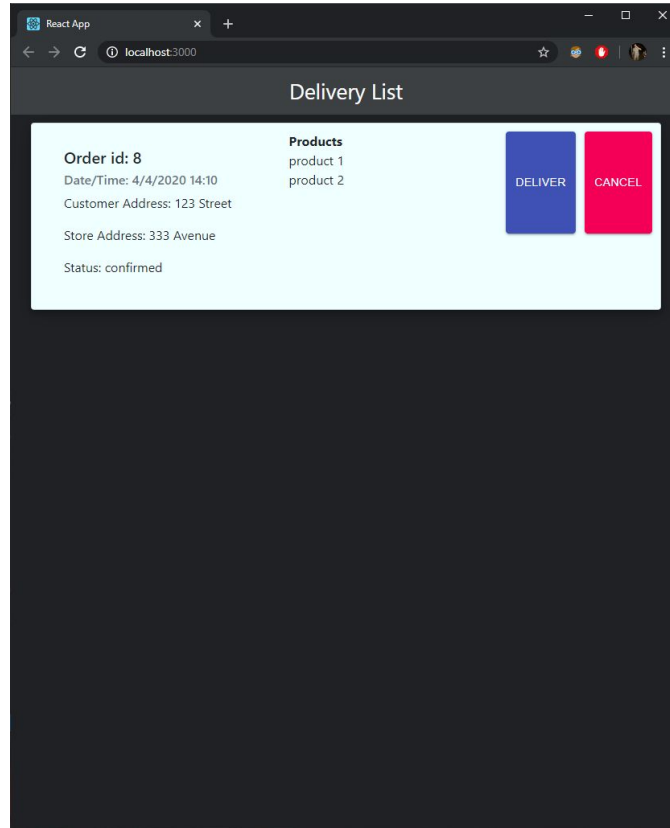

# Prototype - Business app

Orders arrived at  
Business Store

# Prototype - Delivery service app

Confirmed Orders by  
the store arrived at the  
Delivery Service

# Thank you
